Permits & Contractors Relations Section

a certain ratio. It is formed as a result of the decomposition of organic matter that contains sulfur, and is found in sewers and drains.

5) Hydrogen sulfide gas: A colorless gas that has an odor like rotten eggs; it is heavier than regular air and flammable. It is formed by the decomposition of organic matter containing sulfur. It is the cause of many asphyxiation accidents because of the ignorance of those working on sewage lines or those cleaning sewage tanks. Safety rules entail raising the awareness of workers in this field and for sufficient safety equipment to be made available for them, such as air filters, fans to pump fresh air and safety belts. The management should inform them of all precautions and safety measures before they start working.
